DETAILED ACTION

Information Disclosure Statement

1. The IDS filed on May 25, 2005 is hereby acknowledged and has been placed of record.

Please find attached a signed and initialed copy of the PTO 1449.

Drawings

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the following specified features must be shown.

- The “field of hole type nozzles” arranged in the front side “underneath” the slotted nozzle and also “above and underneath” the slotted nozzle, as alternatively recited in claim 18, must be shown or the features canceled from the claim.
- The “control device of the granulating water pressure...”, as recited in claim 19, must be shown or the feature canceled from the claim.
- The “control device of the granulating water flow rate...”, as recited in claim 20, must be shown or the feature canceled from the claim.

No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing

Art Unit: 3752

should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Minor Claim Suggestions By Examiner

3. The following changes are recommended to improve clarity of the claims. The claims have been examined on the merits including the suggested changes below.

- In claim 19, on line 3, --an-- should be inserted between "incorporated as" and "actuator"
- In claim 20, on line 3, --an-- should be inserted between "incorporated as" and "actuator"

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

5. Claims 19 and 20 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Art Unit: 3752

Regarding claim 19, the recitation, “the granulating water pressure” lacks clear antecedent basis. What granulating water pressure is this recitation referring to?

Further, regarding claim 19, the recitation, “in which said slotted nozzle is incorporated as actuator” is unclear. The slotted nozzle is an actuator for what?

Regarding claim 20, the recitation, “the granulating water flow rate” lacks clear antecedent basis. What granulating water flow rate is this recitation referring to?

Further, regarding claim 20, the recitation, “in which said slotted nozzle is incorporated as actuator” is unclear. The slotted nozzle is an actuator for what?

Allowable Subject Matter

6. Claims 11-18 are allowed.

7. The following is a statement of reasons for the indication of allowable subject matter: The prior art, alone or in combination, did not show or teach a spraying head for a granulating installation, comprising a slotted nozzle including a cylindrical flow control body having an oval cross-section, which is approximately centrically disposed between the floor surface and top surface of the nozzle channel and pivoted about its central axis, such that underneath as well as above the control body a nozzle slot is formed, the height of which can be adjusted by pivoting the control body about the central axis, together with the other recited limitations as set forth in claim 11.

Art Unit: 3752

8. Claims 19 and 20 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

9. As allowable subject matter has been indicated, applicant's reply must either comply with all formal requirements specified above under paragraph 2 of this office action, or specifically traverse each requirement not complied with. See 37 CFR 1.111(b) and MPEP § 707.07(a).

Conclusion

10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US Patents to Margesson et al., Lane et al., Sabadics et al., Belnik, Kanazumi et al., George et al., and Stilli, are cited as of interest.
